4D v11 SQL keeps the medical industry's heart beating

A busy medical office is no place for slow data. Schedules, labs, billing and patient flows are all essential functions that have to run smoothly to ensure the patient receives the best care possible. Find out how one company manages to provide the medical community a powerful solution to keep a doctor's office of any size moving with a strong pulse.

Telin Systems of Calgary, Alberta is a recognized leader in providing business solutions to the medical industry. Because Telin understands that building software where speed and stability are of the most importance, Telin has been relying on the 4D Platform for many years.

"Because the pace of technology changes and becomes faster and more demanding, it is vital for us to have a robust platform to build our applications and keeping up-to-date with the current version of 4D makes that possible," said Garry Lee, Managing Partner for Telin Systems. "Anyone building any type of application where data just can't wait really needs to be on the 4D v11 SQL platform," continued Lee.

"It's vital for us to have a robust platform to build our applications, and keeping-up-to-date with the current version of 4D makes that possible."

When 4D v11 SQL was released, Telin systems wasted no time in developing its upgrade plan. Within a few short months, Telin went from production to testing to a smooth deployment with only a few minor challenges and a major satisfaction rating from its clients. The end result was a significant increase in speed and productivity.

Here some key improvements that Telin Clients noticed after they upgraded to the new 4D v11 SQL based software:

- Start time is less than one-minute (This is important should a network restart become necessary during the day)
- Maintains speed with large data transfers of 20-30GB
- Queries do not "bring system to its knees"

Software Developers from all over have come to rely on the stability and power of 4D v11 SQL. Why not upgrade to 4D v11 SQL today?
